Aim of this file: Generate table (r-saquared) for chapter (child) input to base.Rmd (mother)

Reason: i cant get the table to gerate from within a code chunk or r.script, but only once knitted does the table show.., so for now i 'll keep it sepparate here in this (its own) .Rmd.

This file:

- reads code from: "02_rpackages",'projectpackages.R' for libraries.
- reads code from: "03_code/01_code-output","R2RR.csv"
- reads code from: "03_code/01_code-output","R2GGS.csv"

and

- outputs code to: 05_Results-and-discussion.Rmd
